Press release

bdtronic supplies medical device production / High demand for production systems in the health technology sector due to COVID-19 pandemic

Due to the COVID 19 pandemic, the demand for ventilators and analyzers for patient monitoring has risen sharply. bdtronic supports medical device manufacturers in increasing their production capacities. For Philips' medical device division, the company is manufacturing a highly complex system that produces components for monitors for patient monitoring devices. Philips can also rely on bdtronic in times of high demand.

In the production of the patient monitoring devices, VP4 plasma technology is used in addition to dispensing technology. bdtronic is responsible for the smooth interaction of the process steps including the monitoring of the process accuracy.

"In response to the COVID 19 pandemic, we have significantly increased the production of important health technology. These are used in both mobile and fixed devices in intensive care units or operating theatres. Monitoring vital signs is crucial in patient care and an important area of medical technology," explains Dr. Dieter Haase, Managing Director of Philips Medizin Systeme Böblingen.

bdtronic is ready to use its many years of know-how in the field of dispensing and its production capacities to meet the high demand for production systems in the medical technology sector. The company has many years of
